SUMMARY

Results-driven and skilled aspiring web developer with a focus on building scalable, responsive web applications using React, Node.js, Express, and Tailwind CSS. With 3 years of experience in AWS support and systems monitoring, I bring a unique combination of cloud infrastructure knowledge and web development expertise. I am passionate about creating seamless, user-friendly applications that are both performant and maintainable.

WORK EXPERIENCE

IT Support Analyst - Eviden ATOS

July 2021 - Current

- Monitored AWS services (S3) to ensure optimal performance and availability of resources, addressing any issues proactively to minimize downtime.
- Actively identified and resolved technical issues related to system performance, file transfers, and AWS services, working to resolve issues quickly and efficiently to ensure minimal business disruption.
- Managed, processed, and ensured the integrity of Markit files, verifying that they were correctly received, formatted, and distributed within the system as per business requirements.
- Applied the ETL (Extract, Transform, and Load) approach to manage and manipulate data for file management, ensuring accurate deletion, archiving, and proper storage of files to maintain compliance and support business needs.
- Managed the timely and secure deletion of files in accordance with established policies, ensuring data integrity while supporting long-term data storage solutions through archiving.
- Coordinated with internal teams (developers, system administrators, business analysts) to diagnose issues, implement solutions, and improve the overall performance of IT systems.
- Technologies – **AWS, Markit EDM, SQL**

EDUCATION

Bachelor of Engineering | Information Technology

2017 - 2020

Vidyavardhini's College of Engineering & Technology

Grades - 6.52 CGPA

Diploma | Computer Engineering

2014 - 2017

Bhauasaheb Vartak Polytechnic, Vasai

Grades - 80.06%

TECHNICAL SKILLS

Languages & Frameworks: React, JavaScript, Express, Node JS, Java, Tailwind CSS

Tools & Platforms: Figma, AWS, SQL, GitHub, Netlify

Certifications: AWS Cloud Practitioner Essentials, JavaScript Algorithm and Data Structure

PERSONAL PROJECTS

Weather Forecast Application

- A responsive web application built using ReactJS, Node.js, and Express that allows users to view real-time weather data and forecasts for cities worldwide.
- The app integrates with the OpenWeatherMap API to display current weather conditions, designed with a user-friendly interface using Tailwind CSS, it offers search functionality, error handling, and mobile responsiveness.
- Tools used – **ReactJS, Node.js, Express, OpenWeatherMap API, Tailwind CSS**

News App

- Utilized the News API to aggregate news articles in real-time from various trusted sources worldwide. To fetch the latest headlines and filter results by categories such as technology, business, sports, and more.
- Developed a user-friendly interface in ReactJS that allows users to customize their news feed based on specific topics of interest. Users can select categories for articles, providing them with personalized and relevant content.
- Designed a visually appealing and responsive user interface using Tailwind CSS, ensuring that the application looks and performs seamlessly on both mobile and desktop devices. The minimalistic design enhances the user experience by focusing on content and usability.
- Tools used – **React, Tailwind CSS, News API**

Personal Portfolio

- Developed and designed to emphasize my skills and showcase projects in a clean, modern layout that reflects my professional style.
- Built with Tailwind CSS to ensure the site is fully responsive and adapts smoothly across all screen sizes, providing an optimal experience on mobile, tablet, and desktop.
- Utilized Framer Motion to incorporate engaging animations and seamless transitions, enhancing the overall user experience.
- Tools used – **React, Tailwind CSS, Framer Motion**
